

COMPETITIVE SAFETY AUDIT: SAFERIDE

KEY FINDINGS & GAPS

All three apps (Uber, Careem, and InDrive) meet the baseline safety standards (visible driver/car details, trip sharing, SOS buttons, GPS tracking, and post-ride ratings). However, Uber leads in proactive safety with its "Route Deviation Alert" (in select regions), while Careem and InDrive differentiate on pricing models (bidding systems). The major gap is Women Driver Preference, which only Uber offers highlighting a potential underserved market need for female riders seeking female drivers. InDrive's slower post-ride safety response is a clear weakness.

FEATURES	Uber	Careem	InDrive
Driver photo + name visible	✓yes	✓yes	✓yes
Car model + plate shown	✓yes	✓yes	✓yes
Share trip with contact	✓yes (via link+ live tracking)	✓yes (via whatsapp+ live tracking)	⚠yes (via link+ manual sharing)
In-app sos button	✓yes	✓yes	⚠yes (in side menu)
Real-time gps tracking	✓yes	✓yes	✓yes
Route deviation alert	✓yes (some regions)	✗no	✗no
Rider can rate driver after trip	✓yes	✓yes	✓yes
Driver can rate rider	✓yes	✓yes	✓yes
Report safety issue post-ride	✓yes	✓yes	⚠yes (but slow service response time)
Peer-to-peer bidding system	✗no	✓yes	✓yes
Women Driver Preference	✓yes	✗no	✗no
